Comments or questions (8,192 characters max):

I would like to express my concerns regarding the proposed Phillips 66 crude oil trains. Since December, there has been increased traffic on the rail line going through San Luis Obispo. This increased traffic has resulted in Union Pacific trains now regularly idling for hours a day, only a stone's throw from many residences. These trains are not only extremely noisy and disruptive to sleep, but now leaving a polluting residue on our homes and lungs. Calls made to Union Pacific result in a rotation of the individual idling engines, but with the same net result. I think that before any proposed increased use is approved, the current capacity issue causing the regular idling engines around homes should be addressed. Thank you.
